

ConCERTO LOGON Manager

Secure and convenient logical access solution

ConCERTO is an innovative solution that allows the rapid and cost-effective addition of logical access security to existing IT infrastructure and physical access systems. The LOGON solution combines SCM's ConCERTO LOGON manager, ConCERTO Administration software, SCMs SCL series of contactless card readers, and use a security certified contactless smart chip IC.

The ConCERTO Logon Manager software stores logon user names and passwords securely, and facilitates their secure entry into Windows, networks, websites, and applications¹⁾. Windows® logon data is transferred directly from ConCERTO to Windows only after users' smartcards are securely authenticated and (optional) PIN has been verified.

Technology	128 bit AES encryption for data processing and storage makes it a cost efficient alternative to PKI based systems. Common Criteria EAL4+ security certified contactless smart card IC and standardized application/file structure.
User-friendly	Intuitive and easy to use user interface. One click "auto-record" logon process. No need to remember, or look up the correct passwords for numerous logon locations.
Versatile	Server based ConCERTO LOGON manager software together with ConCERTO CardMaker enables administrators and defined users or user groups to manage security policies and logon data.
Feature rich	Security policies include PIN and password policies, random PIN/password generator, password change reminders etc. Definition of card removal behavior such as computer lock, logoff or shutdown computer. ConCERTO LOGON Enterprise PRO also stores web and application access data, payment information and allows drag and drop into website or application entry fields. (see user manual for details)
Simple setup	"Out-of- the-box" product. No change required to existing network configuration and installed infrastructure. Software self-installs at end-user computers and is ready for immediate use.
Interoperability	The ConCERTO Logon Manager and CardMaker APIs make it easy to integrate with a wide range of third-party client and server-based applications, such as facility access card management systems, or identity management systems. The use of ISO/IEC 14443 contactless chip technology ensures global interoperability.
Quick return of investment	Calls to IT Help Desk to recover forgotten passwords are greatly reduced. Due to the security concept of the ConCERTO solution, costs associated with system intrusion - data loss, downtime, recovery expense - are also less likely. Only one credential is needed for physical and logical access. The flexible data structure on the used contactless smart card also allows further application additions such as closed loop payments in canteens, office infrastructure access (e.g. copy machine)

Purchase information

ConCERTO LOGON is available as Enterprise and Enterprise PRO editions bundled with either a contactless mobile reader or a contactless desktop reader. Each ConCERTO LOGON version includes all software components required for implementation.

Product	Ordering number	Features	Bundle content
ConCERTO LOGON Enterprise	DESKTOP PN: 905273	Secure LOGON to Windows® PC & Networks (Server mode)	ConCERTO LOGON Manager for end-user computers ConCERTO CardMaker for Administrator Desktop contactless reader SCL010 ²⁾ Mobile contactless reader SCL3711 ²⁾
	MOBILE PN: 905271		
ConCERTO LOGON Enterprise PRO	DESKTOP PN: 905274	Secure LOGON to Windows® PC & Networks (Server mode) - Logon to websites and applications - Automatic web form fill - Secure storage of personal data such as name, address, payment or information	ConCERTO LOGON Manager for end-user computers ConCERTO CardMaker for Administrator Desktop contactless reader SCL010 ²⁾ Mobile contactless reader SCL3711 ²⁾
	MOBILE PN: 905272		

Supported Systems

Operating system	End-user: Windows® 2000, XP, Vista, or Windows® 7 Administrator/server: Windows® 2000, 2000 Server, XP, 2003 Server, Vista, Windows® 7, 2008 Server
Browser	Internet Explorer 5.5 or higher, Firefox 2.0 or higher

ConCERTO CardMaker

Administration tool for ConCERTO LOGON

The ConCERTO CardMaker software enables administrators to easily manage the logon security policies and logon data of their ConCERTO LOGON Manager installation.

User-friendly	Intuitive and easy to use user interface. Data Server mode or full featured security policy mode.
Administrators control	Administrators logon to CardMaker using an Administrator password, or based on administrator rights granted to a card. Primary Administrator grants and revokes other Administrators' rights.
Feature rich	Define PIN and password policies, including change reminders and repetition control. Define card removal behavior: lock, logoff, shutdown computer, or no action. Define additional end user control settings, such as if self-enroll and default settings change allowance, PIN verification timeout, end-user is allowed to change default settings, and more.
Simple setup	Runs out-of-the-box on the server or administrator computer. Same ease of use as the ConCERTO LOGON Manager software. CardMaker self-installs on a server computer and is ready for use after specifying only three server settings.
Interoperability	Its modular, client-based architecture makes ConCERTO LOGON function independently of the existing network infrastructure. The ConCERTO LOGON Manager and ConCERTO CardMaker APIs make it easy to integrate with a wide range of third-party client and server-based applications, including facility access card management systems, or identity management systems. The CardMaker software provides open interfaces and works with industry-standard databases. Easy data sharing share with the CardMaker database by using the standard APIs provided with the software makes it easy to roll out a converged logical / physical access system. Import end-user data from HR database via ODBC, or link to a third-party physical access control system.
